COMPUTER SCIENCE–RTIS STUDENT | C++ AND C# | SOFTWARE ENGINEERING & GAME DEVELOPMENT

DigiPen Computer Science–RTIS student graduating in May 2028 with experience building C/C++ game engines, deterministic multiplayer networking, and modular Unity/C# gameplay systems. Use automated gameplay testing, telemetry, and debugging to improve game behavior and performance. Leverage GitHub and Perforce repositories and participate in code reviews and Jira tracking. Committed to building reliable software and engaging player experiences. US Citizen.

Technical Skills:

- **Programming:** C++, C, C#; working knowledge of Python and Java
- **Game & Engine Development:** Unity 6, Unreal Engine (Blueprints and basic C++), Gameplay Programming, Collision Detection, Particle Systems, GLM
- **Computer Science & Software Engineering:** Data Structures & Algorithms, Object-Oriented Programming & Design, Debugging, Performance Optimization, Unit Testing, Automated Gameplay Testing
- **Networking & Systems:** TCP/UDP Socket Programming, Deterministic Lockstep Networking, Real-Time Systems, Server-Side Programming (coursework)
- **Development Tools & Technologies:** Git, GitHub, Perforce, Jira, JSON, CMake, WSL, Command-Line Build Tools
- **AI-Assisted Development:** GitHub Copilot, Claude, ChatGPT, Gemini; code completion, targeted debugging, helper functions, and technical documentation, with output validated through code review, compilation, and testing

EDUCATION & OTHER TRAINING

B.S., Computer Science in Real-Time Interactive Simulation (RTIS), DigiPen Institute of Technology, Redmond, WA | 09/2024 – Present (Expected graduation in 05/2028) | GPA: 3.22
Pre-College Game Programming Program, Digipen Academy | 07/2024 – 08/2024
High School Diploma (IB, IGSE), British International School of Boston (BISB), MA | 08/2020 – 06/2024

SELECTED ENGINEERING PROJECTS

Game Engine Development – *Goblin Man* | GAM-200/GAM-250 Project 09/2025 – 04/2026

- Contributed to a five-person programming team developing a C++ game engine with a built-in editor and JSON-driven scene/component architecture.
- Implemented a spatial hash grid to reduce collision candidates and a GLM-based particle system stress-tested with thousands of particles.
- Used logging to diagnose missing components and JSON configuration errors.
- Implemented playtester-requested collection feedback and character particles; recorded, edited, and integrated goblin collection audio.
- Built Unity/C# gameplay agents and analyzed telemetry to identify bugs and assess combat balance.

Skablidoo | Unity/C# RPG | Extracurricular Team Project 06/2026 – Present

- Developing modular combat systems in Unity 6 and C# using reusable interfaces and custom UI components.
- Collaborating with DigiPen teammates using Git for branching, code integration and shared project development.

Gameplay Development | Unreal | GAM-300 Project 09/2026 – Present

- Collaborated on an Unreal tower-stacking prototype as part of GAM-300; created demos using Blueprints and basic C++, including custom Blueprint nodes.

Lockstep-based Multiplayer Game in C++ | CS-260 Project 05/2026 – 07/2026

- Developed a deterministic lockstep networking system in C++, synchronizing serialized player inputs across two-player game sessions.
- Implemented TCP/UDP socket communication and verified matching movement and game events by running both clients simultaneously.

Engine and Game Development – *Gamblers Never Quit* | GAM-150 Project 01/2025 – 04/2025

- Co-developed a C game engine with a five-person team for a multi-scene, card-based casino game.
- Implemented a reusable action queue for UI/card animations and a slot-machine mini-game with scoring and economy mechanics.

DigiPen Academy Game Projects | Unity and C# ..... 07/2024 – 08/2024

- Up We Goat: Programmed player controls and obstacles within a team (programmers, designers, artists, and audio).
- Rock-Paper-City: Implemented rock-paper-scissors combat, combinations that trigger special effects, and enemy AI.

ADDITIONAL EXPERIENCE

Incoming Student Assistant – Tutor, DigiPen Academic Support Lab ..... Begins 10/2026

- Selected to provide 8 hours per week of tutoring for 100- and 200-level Computer Science, Physics, and Math courses.

Intern at Paloma Valverde Consulting, LLC. 08/2022, 08/2023, 08/2024, 08/2025

- Supported operations at a career consulting firm by conducting research to verify client/company information, improving client materials, and assisting with digital tools (i.e., Adobe Acrobat, Grammarly, and Gen AI tools).

Leadership & Volunteering Activities at BISB ..... 06/2021 – 06/2024

- Provided friendly support and coordination during school and community events, interacting with students, staff, and families. Handled transactions and engaged with students during fundraising events.
- Served as Captain of Hokusai House to organize events, provide new ideas, and implement them. Used Microsoft Teams to coordinate students' meetings throughout the year in collaboration with teachers and students.
- Supervised younger BISB students to build gingerbread houses during Christmas events; set up snack stands and sold snacks for fundraising to support community service trips to Tanzania and Costa Rica in 2023 and 2024.
- Coordinated the Dungeons and Dragons club with another student and a teacher for 10 to 12 students.

ADDITIONAL PROJECT-BASED TRAINING

- MAT 197 - Precalculus, Dual Enrollment/Early College Program, Bunker Hill Community College | 01/2024 – 05/2024
- Java Programming: Solving Problems with Software – Duke University; Introduction to Game Design & World Design for Video Games – California Institute of the Arts Coursera.org | 08/2023
- Color for Design & Art, LinkedIn Learning | 08/2023
- Create a First-person shooter (FPS) Weapon in Unity (Part 1 - Revolver), Coursera.org | 07/2023
- Make your first 2D Game with Unity and C# - Beginner Course, Udemy | 01/2022
